

Calamp Viper SC and SC+ radios have a firmware file limit of 300 files and will experience issues if files loaded exceed that limit. You should delete unwanted (not required) files in the Viper if the number of files exceeds 270. To make this easier a CLI command has been created to clean up the unwanted files for you.

1. **NOTE! Never delete the ipr.bin file !**
2. Run the CLI command **cpkg -v distrib.pkg** to cleanup the unwanted files via a “telnet session” or serial “setup port” session. Type **cpkg -v distrib.pkg**<return> Note the spaces in this command. i.e **cpkg**<space>**-v**<space>**distrib.pkg**<return>
3. After cleanup completes transfer all the new upgrade version files to the Viper using an FTP utility, overwriting all old files. Use **Binary Transfer** mode in the FTP software.
4. After all the new files have been transfered into the Viper browse into the radio and check the Package Control on the Maintenance web page to ensure all files pass the test and are present.
5. Note the references in example below are for V3.6. This will change with later versions.
