

Cal/Amp[®] Telematics Cloud[™]

5.44 Release Notes

5.44 FEATURE SET

CalAmp Telematics Cloud (CTC) is proud to announce release 5.44, a production deployment for the CTC platform. Its new and enhanced features are described in this document.

NOTE: CTC system administrators assign user profiles to each user in an organization. Different features will be available to you based on these profiles, so you may not have permission to access everything listed in these notes. If you need to be able to use something you don't have privileges for, contact your CTC system administrator for assistance.

5.44 FEATURE SET	2
Showing an Account's Features	3
Paginating Subaccount Data	3
Associating Operators and Users	3
WARNING! UPCOMING DEPRECATION OF THE AIRID FIELD	3

Showing an Account's Features

We added a new attribute to the account API, *features*, which will show the account-level configurations:

`/account/{id}/features`

`/account/{id}/ancestors/features` will return all the features of the specified account and its ancestors.

Paginating Subaccount Data

`/account/{id}/subaccounts?v=2.2` will support pagination. Note that this is applicable only for the new version; existing versions won't be changed.

Associating Operators and Users

We added the ability to associate an operator (`/services/connect/operators`) with the user entity (`/services/connect/users`). This will be a bidirectional relationship, so you will be able to create a user and associate it with an operator as well as create an operator and associate it with a user.

WARNING! UPCOMING DEPRECATION OF THE AIRID FIELD

The AirID field is being deprecated. If you rely on the AirID field in any API requests, you'll need to update to ESN or one of the other unique identifiers available in the API. The AirID field will stop being populated in device provisioning as early as May 31, 2026.

SUPPORTING YOUR SOLUTION EVERY TIME. ALL THE TIME.

CalAmp does more than provide you with application services – we also supply you with an always-available resource for attention, answers, and insights if you have questions about your solution.

CalAmp's Technical Support team stands beside you to ensure that any concerns you have with any element of your solution – application, hardware, or operations – are addressed quickly and completely.

You can contact the Technical Support team via email at solutionsupport@calamp.com.
