

5.46 Release Notes

5.46 FEATURE SET

CalAmp Telematics Cloud (CTC) is proud to announce release 5.46, a production deployment for the CTC platform. Its new and enhanced features are described in this document.

NOTE: CTC system administrators assign user profiles to each user in an organization. Different features will be available to you based on these profiles, so you may not have permission to access everything listed in these notes. If you need to be able to use something you don't have privileges for, contact your CTC system administrator for assistance.

5.46 FEATURE SET2

 Multi-Factor Authentication (MFA) Platform Readiness3

 Improved Data Pipeline Stability and Monitoring3

Multi-Factor Authentication (MFA) Platform Readiness

Implemented foundational backend support for Multi-Factor Authentication (MFA) to enable upcoming MFA capabilities in a future CTC Admin release.

Action required: None. MFA configuration and enrollment options will be introduced in a future release.

Improved Data Pipeline Stability and Monitoring

Improved memory stability during periods under load, reducing the risk of performance slowdowns and improving overall reliability. Monitoring and diagnostic capabilities have also been enhanced with additional metrics, logging, and API usage analytics, enabling faster detection and troubleshooting of data delivery issues and providing greater visibility into Datapump API adoption and usage patterns.

SUPPORTING YOUR SOLUTION EVERY TIME. ALL THE TIME.

CalAmp does more than provide you with application services – we also supply you with an always-available resource for attention, answers, and insights if you have questions about your solution.

CalAmp's Technical Support team stands beside you to ensure that any concerns you have with any element of your solution – application, hardware, or operations – are addressed quickly and completely.

You can contact the Technical Support team via email at solutionsupport@calamp.com.
