### DM-CTC 3.20 Release Notes

---

## 3.20 FEATURE SET

### Fix: Firmware Values Now Correctly Updated for Device UI Display

Addressed an issue where firmware discovery did not run when firmware was installed during an active file transaction, resulting in outdated firmware values. Logic has been updated to **perform discovery even while a transaction is in progress**, without interrupting the assigned file download; cancellation is still required to stop the file installation.

### Feature: New Bulk Manufacturing Information API

A new API has been added to the DM Gateway to retrieve manufacturing information for multiple devices at once. The endpoint `{{GWBaseUrl}}/devices/manufacturing/bulk/search` accepts up to **100 device identifiers** in the `identifiers` field and returns manufacturing data in the standard CTC response format. Please review the Developer Portal for additional information.
