

DM-CTC 3.22 Release Notes

3.22 FEATURE SET

Fix: Jpod Config OTA Status Now Validated by Version and CRC

Resolved an issue where Jpod configuration updates were marked as completed even when the device continued reporting a previous version. OTA completion logic has been updated to require both version and CRC validation before reporting a successful update, ensuring accurate status when configurations are applied during Jpod OTA workflows.

Fix: Correct Error Message Returned for Invalid Job Payloads

Resolved an issue where DM Gateway returned a generic **502 Bad Gateway** error when submitting a job with invalid task details. Error handling has been updated to return a clear and accurate validation message indicating the payload contains invalid task details.

Fix: Device Files No Longer Show Duplicate Downloads from Rapid FURL Requests

Device Files no longer show duplicate file entries when download requests are sent in quick succession. Only a single file entry is maintained under **CURRENT** files, while duplicate download attempts are cancelled and recorded in the **LOG** as Cancelled.

Fix: Smart Search API No Longer Returns 502 for Out-of-Range Page Requests

Resolved an issue where the Smart Search API returned a **502 error** when requesting a page number beyond the available results, particularly when `getFileStatus=false` was specified. The API now safely handles empty result sets for out-of-range pages, preventing unhandled errors.

SUPPORTING YOUR SOLUTION EVERY TIME. ALL THE TIME.

CalAmp does more than provide you with application services – we also supply you with an always-available resource for attention, answers, and insights if you have questions about your solution.

CalAmp’s Technical Support team stands beside you to ensure that any concerns you have with any element of your solution – application, hardware, or operations – are addressed quickly and completely.

You can contact the Technical Support team via email at solutionsupport@calamp.com.
