3.42 FEATURE SET

Improvement: Reduced Redundant File Log Status Updates

Improved file status logging to prevent duplicate status entries once a file reaches a final state, resulting in a cleaner, easier-to-read file status history.

Enhancement: Added Sorting Options for CAN Request Retrieval

Added optional sorting to CAN request retrieval, with results defaulting to the newest-first based on created or updated date.

Fix: Improved Device Messaging and Firmware/App Update Reliability

Resolved an issue where duplicate MQTT initialization messages could be queued and sent to devices, resulting in the device being stuck in a pending state.

Fix: Improved JPOD2 Configuration File Status Accuracy

Resolved an issue where JPOD2 configuration files could be marked INVALID without a clear reason. Configuration file status is now more accurate and easier to troubleshoot.

Fix: Improved IPK Application Update Reliability on LMU5541 Device

Resolved an issue where certain LMU5541 devices could fail integrity checks during IPK application updates, which was preventing updates from completing successfully.

SUPPORTING YOUR SOLUTION EVERY TIME. ALL THE TIME.

CalAmp does more than provide you with application services – we also supply you with an always-available resource for attention, answers, and insights if you have questions about your solution.

CalAmp's Technical Support team stands beside you to ensure that any concerns you have with any element of your solution – application, hardware, or operations – are addressed quickly and completely.

You can contact the Technical Support team via email at solutionsupport@calamp.com.
